

Cisco TelePresence MX200

Telepresence is arguably the biggest innovation in communications of recent times, encouraging better collaboration and higher productivity among dispersed team members. The barrier to enabling telepresence in every existing meeting room has been the lack of an easy, globally available solution with plug-and-play installation and a consistent experience at the right price performance.

The Cisco TelePresence® MX200 reinvents the team meeting room experience as a turn-key option that combines absolute quality and high-value in a single solution. It features a highly integrated design that is easy to install and use, and a global solution for service and replacement. The MX200 is a 42-inch express version of the Cisco TelePresence line of multipurpose room-based systems.

Fifteen Minutes from Box to Call

Installation is streamlined with an auto-launch wizard and video-on-demand (VoD) instructions, so you can install the system and be on a call in roughly 15 minutes. Auto-provisioning and intelligent self-configuration means the system can be remotely arranged on the network by the IT department in advance of deployment. Locally, it is simply a matter of putting the system in place and plugging it in—it is then ready to make a video call.

Global Service Only Cisco Can Provide

Service is managed from one source, globally, allowing consistent world-class Cisco support in more than 120 countries. In the unlikely event that a new part is required, Cisco fulfills the request quickly from one of our more than 900 fulfillment depots located worldwide.

Better yet, ongoing management is easy, too. Automatic diagnostic tools and 24-hour help-desk support help ensure that any possible issues can be managed before they affect meetings.

Simplicity at Its Best

The ability to deploy telepresence in more meeting rooms widens the user community, so Cisco has designed the Cisco TelePresence MX200 to be easy for everyone. The simple and intuitive touch screen makes communicating effortless, and a VoD training module and troubleshooting guide are available for quick guidance.

The integrated design ensures consistency so that users are comfortable when they walk into any MX200 meeting room.

Driving the value of telepresence throughout the organization

The Cisco TelePresence MX200 is designed and priced so the benefits of telepresence can be extended to more meeting rooms—for greater access by teams throughout your organization. Unique to Cisco, the MX200 enables large-scale deployment and easy new roll-outs by supporting IT services with remote management and set-up, global services and support, and an intuitive interface so users can manage their own meetings.

Almost as important as the price performance, the simplicity and highly integrated design of MX200 is intended to drive the value of telepresence more pervasively throughout the organization for everyday meetings:

- Easy to install
- Unmatched global service and support
- Intuitive interface
- Priced for scaling value

Features and Benefits

Cisco TelePresence MX200 is simple to deploy, simple to service, and simple to use at a value for everyday visual communication, yet with the same attention to quality as the rest of the Cisco TelePresence portfolio.

- Quick and easy to install: It takes just 15 minutes to set up and initiate a telepresence call.
- Auto-provisioning: With Cisco® Unified Communications Manager or Cisco TelePresence Video Communication Server provisioning, the system can be prearranged on the network remotely, so a password is all that is required at the installation.
- High-quality display: The 42-inch display with clear 1920 x 1080 resolution enables crisp, clear images.
- Integrated PrecisionHD 1080p 4X camera with dedicated presets for flexibility for quick close-ups of individuals or tools such as white boards.
- Simple control: An 8-inch Cisco TelePresence Touch display makes managing a call easy.

- Video resolutions up to 1080p30 and 720p60: These resolutions bring the Cisco TelePresence experience to the team meeting room.
- Natural collaboration with fluid one-touch sharing of WXGA/720p30 high-definition (HD) content.
